

# Updates on KoreaMed & Synapse

## 김태일

서울대학교 치의학대학원 / 대한의학학술지편집인협회의 정보관리위원회

## Taeil KIM

Seoul National University School of Dentistry / KAMJE Information Management Committee

KoreaMed (<https://koreamed.org>), a service of the Korean Association of Medical Journal Editors (KAMJE), provides access to articles published in Korean medical, dental, nursing, nutrition and veterinary journals.

KoreaMed is the abstract database of KAMJE member journals with links to full-text content in Synapse and publishers' e-journal platforms. Medical Subject Headings (MeSH) terms are automatically, and therefore immediately, assigned to records when new articles are indexed in KoreaMed. Unique identifiers such as Digital Object Identifier (DOI) and Open Researcher and Contributor ID (ORCID) are added in the records. As of March 2018, KoreaMed covers more than 264,000 articles published in 249 KAMJE member society journals.

In this presentation, we will check the present state of KoreaMed & Synapse and share our perspectives to the future of KAMJE journals.
