Extracting metadata from pdfs - comparing EndNote,Mendeley,Zotero & WizFolio

Note :This was blogged in July 2010, since then most of the reference managers have improved substantially so the information here can be considered outdated.

Interest in reference managers is increasing due to the increased competition in the area. Martin Fenner is pretty well known for among many things his reference manager overview , while Owen Stephens over in the UK has organized two conferences so far with the title "Innovations in Reference Management"

The latest reference managers are not simple citation/reference managers, but try to take into account web2.0 trends, allowing sharing of references and recommending articles, taking into account workflows, (working with institutional repositories etc), but I think I'm most interested in the most basic functions of a reference manager.

Namely, how easily does it allow you to import references?

There are many methods that can be used to add references to reference managers but recently EndNote X4 added the ability to add bibliographic data from the pdfs you download.

This feature which was already available for Mendeley, Zotero, Wizfolio is very useful for users who have a bunch of pdf articles but have being manually creating references in the past. To start using the reference manager, they just point the reference manager to the folders with the pdfs and you automatically get the correct bibliographic data with the pdfs linked to them.

It's not as easy as that of course. There are various methods to figure out the bibliographic data from the pdf article, from extracting metadata that Publishers have embedded into metadata (including doi) into the pdf, cross-checking with other databases such as Google Scholar (Zotero), PubMed (WizFolio) , or possibly some sort of crowdsourcing of the correct info (Mendeley). If all else fails, the reference manager can try to "guess" from the text based on location.

Comments on results

EndNote

The video on new features in EndNote states that this features works only on official vendor pdfs, and pulls info via crossref/doi. In general EndNote plays it safe, unlike say Mendeley or WizFolio when it produces a citation, it almost always 100% correct. There's one exception, where it doesn't seem to handle conference proceeding properly, earning a "partial" because it thinks the citation is a journal, and hence lacks information for the conference.

Mendeley

[edit] I was not logged into my Mendeley account when I did the test. A quick retest shows that when logged in, Mendeley seems to be automatically? pulling in data from other sources (crossref?), results will then be on par with Zotero in this test. Will investigate. What follows below is based on not being logged on.

I'm not sure how Mendeley handles this, but my test of the 10 papers above, show that it is almost able to get something for sure though it's not 100% accurate, resulting in many "partials". This can vary from cases where it gets its almost completely correct except for the journal/conference field being wrong or missing, or to be almost totally incorrect, with many missing or error fields and the article title being correct only.

Zotero

In this simple test, Zotero seems to do the best. It seems to be similar to EndNote extracting the metadata via DOI (There's one anomaly - the 4th title where it gets it almost right, except the title is messed up with crossref xml tags) , but it outdoes EndNote, by producing almost perfect bibliographic data for an additional 5 entries.

The trick seems to be that Zotero pulls records from Google Scholar. Unlike EndNote, Zotero also seems to be able to recognize article types other than journal articles, correctly using conference paper types with the correct field info.

• Endnote/Mendeley/Zotero

In general, EndNote seems to be the baseline results. Zotero does the best because of Google Scholar intergretion. Mendeley and WizFolio gives mixed results, of the two Mendeley seems better but both sometimes give wrong information. In terms of publishers, Wiley and ScienceDirect articles seems to be the easiest to handle probably because metadata/doi is embedded in pdf?

These are the "official" pdfs from the publisher, so in theory, figuring out the citations would be easy. The next simple test I did was to do a search in Google Scholar. The idea here was to see how well the reference managers did with conference proceedings, "unoffical" preprints etc.

Conclusion

Let me stress again, this is a test I did out of curiosity. A sample of 15 articles clearly isn't enough to provide anything but my subjective impressions. For one thing it covers only articles mostly from ScienceDirect, Wiley and ACM Digital Library. Results will differ in particular if you get papers from say JSTOR.

Also due to the search topic used, understandably the articles pulled up are all new (2005 and after), the results will probably differ a lot if articles used were say from the 90s or even older, as the pdfs available would be different (no metadata embeded or worse just scanned pdfs).

I'm probably going to have to do another test with this, but the last time I tried, the hit rate was dismal for older articles even those in major databases like JSTOR. Another interesting avenue would be to look at stuff on preprint servers, open access servers etc.

Note it goes without saying, if I were doing medical articles and used Wizfolios "locate bibliography" function to clean up citations, I'm sure the results would be excellent.

PDF & Quick Edit - Amoli-2010-Replication of TCF7L.pdf
Replication of TCF7L2 rs7903146 association with type 2 diabetes in an Iranian population
Mahsa M. Amoli[1], Parvin Amiri[1], Javad Tavakkoly-Bazzaz[1], Elham Charmchi[1], Jila Hafeziyeh[1], Mohammad Keramatipour[2], Maryam Abiri[2], Shirin Hasani Ranjbar[1] and Bagher Larijani[1]

[2]Department of Medical Genetics, Tehran University of Medical Sciences, Tehran, Iran.
Abstract
The transcription factor 7-like 2 gene (TCF7L2) rs7903146 T allele is constantly associated with Type 2 diabetes in various populations and ethnic groups. Nevertheless, this has not been observed in two studies involving Arab populations. The aim of the present study was to investigate the association between TCF7L2 rs7903146 in an Iranian population. Type 2 diabetes patients (N = 258) and normal healthy control subjects (N = 168) from the same area, were examined. The ARMS- PCR (Amplification Refractory Mutation System) technique, subsequently validated by direct sequencing, was used for genotyping. Allele and genotype frequencies were significantly different between patients and controls TT vs. CT + CC [p 0.0081 OR 3.4 95%CI (1.27-11.9)] and T vs. C allele [p 0.02 OR 1.4 95%CI (1.03-1.9)]. Our data thus confirm the association between the rs7903146 T allele and T2D in an Iranian population, contrary to previous reports in Arab populations. This can possibly be attributed to differences in ethnic background or the effects of environmental factors.
Key words: TCF7L2, gene, polymorphism, T2DM.
Received: October 20, 2009; Accepted: February 5, 2010.
Showing 113 of 113 references.

Net Reclassification Improvement and Integrated Discrimination Improvement
New Standards for Evaluating the Incremental Value of Stress Imaging for Risk Assessment
Todd D. Miller, MD; J. Wells Askew, MD
The role of stress testing in the noninvasive evaluation of patients with possible or known coronary artery disease has evolved from functioning as a diagnostic tool to serving primarily as an aid in risk stratification. The results of clinical assessment and stress testing can be combined to estimate individual patient risk and guide subsequent treatment. National guidelines recommend that stress imaging preferentially be performed instead of standard exercise testing in patients with characteristics consisting of inability to exercise adequately, uninterpretable exercise ECG, or previous coronary artery disease revascular-
improved predictive accuracy for the cardiovascular end point but not for the end point of overall mortality.
In view of the abundant literature examining the prognostic value of stress MPGS, why publish another article on this topic? The major contribution of the article by Candell-Riera et al[6] is the application of NRI and IDI. The standard approach of examining the association between a variable of interest (in this case MPGS) and clinical outcome consists of applying a series of tests of increasing statistical rigor. The first test determines whether a statistically significant association exists by

WHAT WILL IT DO FOR ME?

The Quick Guide to Choosing a Reference Manager

RefWorks	flow	MENDELEY	EndNote	zotero
RefWorks is the University of Illinois' supported citation management tool. It is free to all students and accessible after graduation. It is browser-based and offers a multitude of features.	RefWorks Flow is a browser-based tool that saves references and allows you to read and annotate PDF articles. You can also collaborate with colleagues and link to Dropbox for extra storage.	Mendeley is a free software that you can download to your computer or use in-browser. It takes all of your PDF article files and organizes them. It allows for tagging, and has a growing community of scholars.	EndNote is purchased by some labs, which require its use. You can set up preferences to search within specific databases and collect citations through a personalized interface.	Zotero is a free software that you can download and use on Firefox, with plugins for Chrome and Safari. It saves citations and connections to online media, as well as taking screenshots of your internet research.
TIME IT TAKES TO LEARN				
45 MIN	30 MIN	45 MIN	1-2 HR	30 MIN
GREATEST WEAKNESS				
You cannot use RefWorks offline. It requires an internet connection. RefWorks downloads article citations and does not focus on multimedia, which would have to be entered by hand and linked.	You cannot use RefWorks Flow offline. It has fewer options for importing and searching for articles than RefWorks does. While references can be saved in multiple folders, there is no tagging.	Mendeley has some difficulty downloading citations and PDF files from library databases. Older PDF files that do not have proper metadata will not give proper citation information to Mendeley.	EndNote costs money, but access may be available through your program. If it is, will that transfer to you upon graduation? If not, you will need to move your citations to another program.	Zotero is used with your personal browser – to use it on multiple devices you have to carry your library settings on an external device or sync via Firefox, which is not secure on a public computer.

RESEARCH MANAGEMENT TOOL: ENDNOTE

EndNote is a desktop program that helps researchers collect and organize references and documents from online sources (or elsewhere) and to create a searchable personal database. EndNote allows writers to find and cite these references while writing, and to create bibliographies formatted in their style of choice. EndNote is flexible, customizable and sophisticated. For most users, however, it requires a significant investment of time to learn to use well.

- Recommended for larger research projects, frequent writers or authors with large reference collections.
- EndNote offers online accounts for synchronizing across multiple devices and collaborative projects.

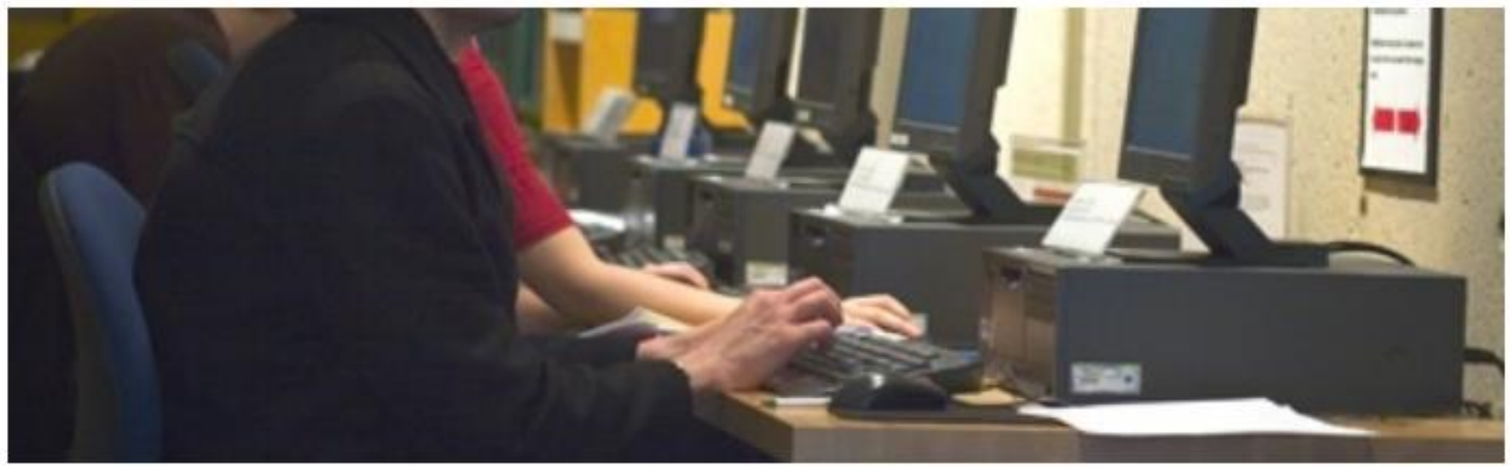
RESEARCH MANAGEMENT TOOL: REFWORKS



RefWorks is a Web-based program that helps researchers collect and organize references from online sources (or elsewhere) and to create a searchable personal database. RefWorks allows writers to find and cite these references while writing (using Word), and to create bibliographies in their style of choice. Access to RefWorks requires a valid Harvard ID and PIN. Start using RefWorks now or learn more.

- RefWorks simplifies group work, collaboration and sharing of a few references or an entire database.
- Users may have as many accounts as they like; groups may also set up accounts for group work.
- RefWorks provides quick and easy ways to create and distribute links to online reading lists, bibliographies and syllabi.
- Harvard graduates may register for an alumni account.

RESEARCH MANAGEMENT TOOL: ZOTERO

zotero

Zotero is is a free, easy-to-use tool to help you **collect**, **organize**, **cite**, and **share** your research sources.

- Collect references automatically; add full-text searchable PDFs to your library, and sync to the cloud
- Find and cite references and create bibliographies with ease
- Collaborate with other researchers by creating group libraries; share files, notes, and bibliographic data
- Zotero excels at projects large and small
- Zotero is open-source software and free for anyone to use

Choosing a citation management tool

All of the tools will help you organize your research references and all include a plug-in for word processing programs to format citations and create bibliographies. But some of the tools offer other features, such as support for collaboration, a web-based interface, and mobile applications.

The Stanford University Libraries provide campus-wide subscriptions to RefWorks and Mendeley. EndNote Web is part of the Stanford University Libraries' subscription to Web of Knowledge. Zotero is an open source tool with basic features at no charge.

The following comparison charts may help you choose a tool that is best for you:

- Terman Engineering Library's citation tools comparison document
- University of Pennsylvania Libraries' scenario based comparison chart
- Wikipedia's comprehensive comparison of reference management software

Choosing a Citation Manager

Choosing a Citation Manager: Zotero, Mendeley, EndNote

The following popular citation managers provide the same basic features and functionality with some exceptions. Below are a few scenarios that might be helpful when choosing a citation manager. Once you have narrowed down the choices, the rest is personal preference. Some tips: Consult the comparison chart below for specific features. Talk to people in your department – some disciplines tend to use one tool more than others. Consult your subject librarian for a recommendation. For a more complete list of citation management options see this Comparison of reference management software article.

• Pennsylvania 대학의 평가

I Need to:	Use:	Why:
…work from multiple computers or locations.	Zotero Mendeley EndNote Basic	**Zotero** saves your citation library to your local computer, but **syncs with multiple computers** so you can work from home, work, or school. Mendeley is a program that lives on your local computer, but **syncs with a web account**. **EndNote Basic is entirely web-based** and can be accessed from any computer with internet access, and can sync with **EndNote desktop**.
…work without an Internet connection.	Zotero Mendeley EndNote	Zotero, Mendeley and EndNote store your citation libraries **locally** on your computer.
…archive web pages and import citations from sites **such as Amazon and ArtSTOR**	Zotero	**Zotero** allows you to **easily save snapshots** of web pages and annotate them within your citation library. It is a great tool for scraping citation information from web-based publications and some commercial and social networking sites.
…work on a **group project** or **share my citations with others.**	Zotero Mendeley EndNote Basic	**Zotero allows you to share** your citations through shared folders -- you can give individuals or groups permissions to add and edit the citations in the shared folder. **Mendeley** allows you to share citations and documents with a group of **up to 2 other users,** or create a public reading list that is open to all. **EndNote Basic** allows you to create and share groups with other users.

Reference management tools

Many software tools are available to help students and researchers collate and manage citations and references. Here are a few recommendations from library staff:

- Mendeley
- Zotero
- Endnote

If after reading this documentation, you require further assistance in enabling reference management software to work with library resources, please contact the eresources helpdesk.

Gathering Citations

• Washington

You cannot go wrong choosing any of the tools, but it helps if you take a few things into consideration before starting. Remember that you can switch between the tools, it just becomes less convenient the longer you use a tool and the more file attachments you collect.

• Washington 대학의 평가

Reasons to choose Zotero:

Your research content is diverse: It is the easiest method to gather citation records for non-PDF and PDF content. Zotero's single-click capture works with more databases, catalogs, and websites than Mendeley's Web Importer. You can also enable the retrieval of PDF metadata, which allows you to create citation records just from dragging a PDF into Zotero. Zotero is open source and cannot be acquired by a company.

• Washington 대학의 평가

Reasons to choose Mendeley:

Your research content is primarily contained in PDF files: Mendeley has an integrated PDF viewer and can create citation records just from importing a PDF file. Mendeley.org has the strongest website and community platform.

• Washington 대학의 평가

Reasons to choose EndNote:
Zotero and Mendeley are relatively young tools when compared to EndNote. EndNote X6 offers some advanced features that might be necessary for your discipline and work flow. However EndNote X6 is not free and can be purchased with an educational discount through the Washington University Campus Store or E-Academy.

• Oregon 대학의 평가

Criteria	Zotero	Mendeley	EndNote	EndNote Web
Cost	Free	Free	$105, Student discount through book store	Free to OSU users
Web based?	Yes	Yes, but not primarily	No	Yes
Storage capacity	Unlimited local storage and data syncing; 500MB free Zotero file syncing, if you register with an OSU email address (larger syncing plans available for purchase); or can use WebDav	Unlimited local storage and data syncing; 1GB personal and 100MB shared online space (larger online storage plans available for purchase)	Unlimited local storage	Limited to 10,000 citations
Create group or shared libraries	Yes	Yes, free for up to 3 group members (larger group plans available for purchase)	Yes, with EndNote Web account, but can't share PDFs with the group	Yes, but can't share PDFs with the group
Number of Citation Styles	~6400 styles (7411)	~6400 styles (uses Zotero's word processing connections)	~5000	~5000

참고 문헌 달기

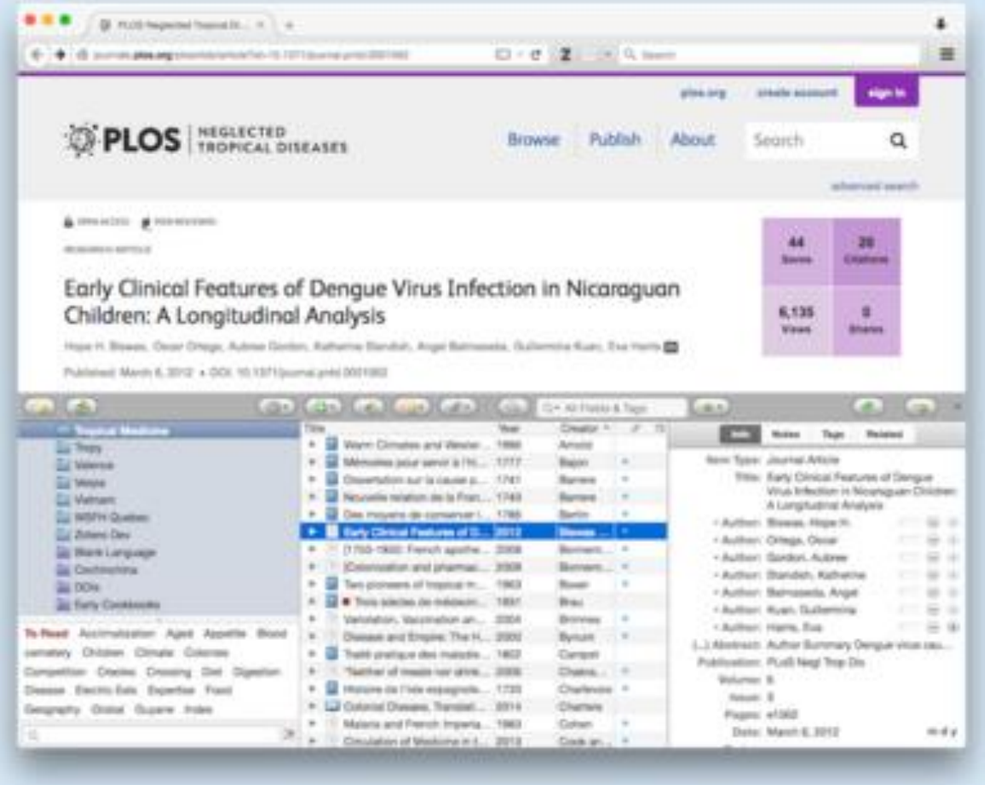
Zotero for Firefox

Zotero for Firefox lets you capture and organize all your research without ever leaving the browser.

Zotero 4.0 for Firefox

Add a plugin for Word or LibreOffice

Trouble installing Zotero?



Zotero Standalone

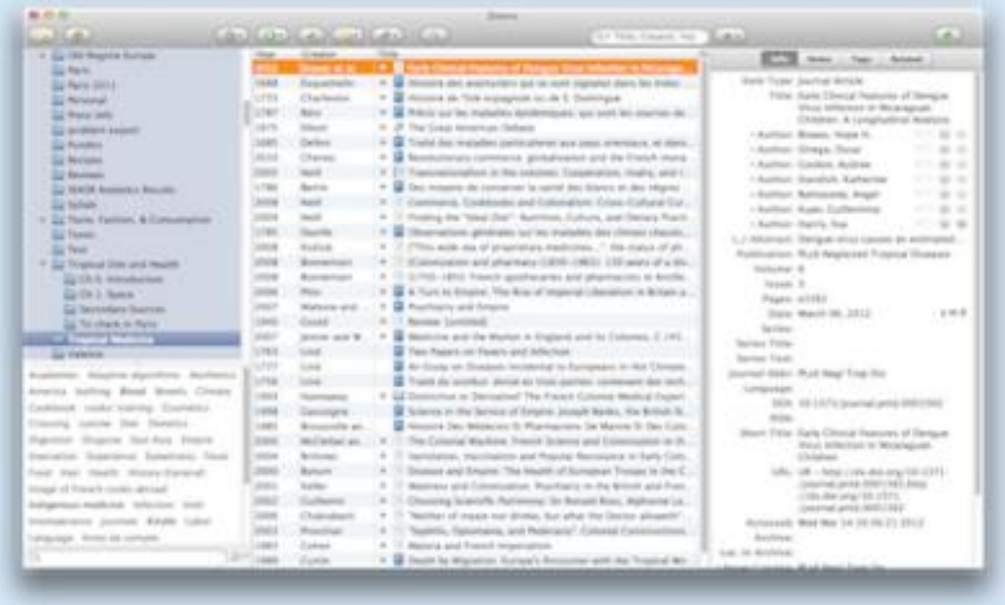
Zotero Standalone runs as a separate application and plugs into your choice of browser.

Zotero 4.0 for Windows

Add one of the following browser extensions:

Chrome Safari Firefox

Plugins for Word and LibreOffice are included



참고 문헌 달기

Installing Word Processor Plugins for Zotero for Firefox

This page provides word processor plugins for users of Zotero for Firefox. **Word processor plugins for Zotero Standalone can be installed from the Cite pane of the Zotero preferences.** Users of Firefox beta releases should see the Firefox beta compatibility page.

The word processor plugins are distributed as Firefox extensions, which provide word processor integration to Zotero and install the necessary components into the word processors. After you have installed a plugin from this page, Firefox will prompt you to install later versions automatically the same way that it does for the Zotero Firefox extension.

Zotero Standalone Users: Word processor plugins are included with Zotero Standalone, and can be installed from the Zotero preferences. Plugins on this page are for Zotero for Firefox only.

Microsoft Word

Windows

The latest version of the Word for Windows plugin for Zotero 3.0+ is **3.5.4** (compatible with Word 2003-2016 excluding Word 2010 Starter Edition, and Firefox 31 and later).

- Install Word for Windows Plugin 3.5.4 (Firefox extension)

Mac

The latest version of the Mac Word plugin for Zotero 3.0+ is **3.5.13** (compatible with Word 2004–2016 and Firefox 4 or later).

- Install Word for Mac Plugin 3.5.13 (Firefox extension)

Word 2008 users: Zotero functionality is located under the Word script menu. See here for more details.
