

Crossref Update & Using Crossref Services in the Publishing Process

Rachael Lammy
Member & Community Outreach
[@rachaellammy](https://twitter.com/rachaellammy)

KAMJE Workshop, 19 July 2016

We are Crossref, a not-for-profit membership organization for scholarly publishing, working to make content easy to find, cite, link and assess. We do it in five ways: rallying the community; tagging metadata; running a shared infrastructure; playing with new technology; and making tools and services to improve research communications.

It's as simple—and as complicated—as that.

Crossref overview

- 5500 publisher members, 1 member 1 vote
- Metadata store of 80 million scholarly content items
- Persistent citation linking
- Funder identifiers
- Report and display corrections & retractions
- Check manuscripts for similarities
- Data about content activity e.g. social, dataset links
- Open Metadata API & Search

Who uses Crossref?

- Funders
- Institutions
- Archives & repositories
- Research councils
- Data centres
- Professional networks
- Patent offices
- Indexing services
- Publishing vendors
- Peer review systems
- Reference manager systems
- Lab & diagnostics suppliers
- Info mgmt systems
- Educational tools
- Data analytics systems
- Literature discovery services
- Registration Agencies

81,000,000
content items

Submission

- Collect funding information
- Collect ORCID iD

Review

- Run checks for originality

Publication

- Deposit metadata and mint DOI including:
 - funding data
 - ORCID iDs
 - references
 - full-text links
 - license information
 - CrossMark metadata
 - Clinical trial information

Post-Publication

- Update and correct the literature
- Show citation information and other usage data
- Enable text mining
- Have ORCID records auto-update
- Use of the metadata by third parties

If you authorize Crossref
and DataCite to update
your ORCID profile

ORCID

and you add your ORCID
to your paper or
dataset submission

when your
publication
gets a DOI,
your ORCID
profile will
get updated

AUTOMATICALLY!

What is Crossref ORCID Auto-Update?

- When publishers deposit an author's ORCID with the article metadata, Crossref will request long-term permission from that author to post works to their ORCID record.
- Once permission is granted, Crossref will automatically post these works to the authors record and any future publications from any Crossref member.
- Any article deposited with an author's ORCID in the past will also get automatically pushed to the record after permission has been granted.

How's it going?

Works with at least one author ORCID:	363,478
Publishers depositing ORCIDs:	480
Requests sent to authors for permission:	256,667
Permission not given (or no response):	155,300
Works pushed to author profiles:	153,254

CrossMark Benefits

- Convenient - one place to access information
- Works in both HTML and PDF
- Easier for researchers to cite the most recent version of content
- Additional publication information all in one place
- Free for researchers to click on
- More dissemination of your metadata

CrossMark

[About CrossMark](#)

Linked Clinical Trials in Crossref

- Deposit of registered clinical trial numbers (CTNs) referenced in articles
- Links to other articles that also reference the same CTN
- Pre-results, results, post-results
- Display and navigation within CrossMark

Here today, here tomorrow

We are obsessed with persistence - of links, of our technology, and of the organization.

Membership and service fees cover our costs, and our surplus means we can do new things and sustain the community infrastructure for the long term.

Thank you!
