Three years ago, *Journal of Periodontal & Implant Science* (JPIS) decided to adopt ScholarOne of Thomson Reuters as e-submission system in an effort to upgrade manuscript submission experience and review workflow. Since then, we have enjoyed having one of the best online manuscript-processing portal with a more stable submission and decision process.

However, as the standards in the scholarly world have evolved, there is now a higher need of something that could encompass a broader range of factors such as ORCID, CRediT, and JATS XML in our own system. After much deliberation, the JPIS editorial board has come to a consensus that we need another manuscript submission portal and peer-review tracking system for our journal which will allow us to meet all the current expectations as a high-quality journal. It is our pleasure to announce that Editorial Manager (EM) of Aries Systems Corporation is now to be the official e-submission system for JPIS.

EM started out as Editorial Assistant, a desktop application that offered journals to track their manuscripts in the early 1990s. In 2001, EM was newly launched and has been increasingly the choice for many scholarly societies and publishers with more than 6,700 journals as active users now. Aries Systems Corporation is a leading company that has quickly adopted industry standards to offer effective workflow solutions.

Given all these, we strongly believe that Aries Systems Corporation will enable JPIS to bring top notch content to the world. By implementing EM into our journal, we are very hopeful that JPIS has the means to further reach the scholarly community.
